

## CLAIM LISTING

The following listing of Claims will replace all prior versions and listing of claims in the application:

1. (currently amended) A method for creating a customized composition at an assembling web site, comprising the steps of:

providing a user interface configured to enable a user to input preference data;

automatically correlating the preference data to a plurality of different sources from which graphics related to the preference data are accessible;

for each of the plurality of different sources of graphics, automatically obtaining a reference to a graphic related to the preference data that is accessible from that source; and

receiving a request for a single composition, the composition being a file to include references for accessing a plurality of graphics, each graphic accessible from one of a plurality of different sources, the request including data reflective of information supplied by a user through a user interface;

processing the data to identify the plurality of different sources;

obtaining, for each of the plurality of different sources, the reference to the graphic accessible from that source; and

creating the single a custom composition that includes each obtained reference to a graphic and information for positioning each referenced graphic on a sequence of pages generated by processing the composition.

2. (currently amended) The method as defined in claim 1, the obtaining step comprises obtaining a reference to a graphic accessible from a different web site from the assembling web site.

3. (previously presented) The method as defined in claim 2, wherein at least one graphic is generated dynamically at the different web site, when the web site is accessed.

4. (Original) The method as defined in claim 1, wherein each of a plurality of the different sources are on different web sites from said assembling web site.
5. (Original) The method as defined in claim 1, wherein the obtaining step comprises accessing at least two different web sites and retrieving information therefrom.
6. (cancelled)
7. (cancelled)
8. (currently amended) The method as defined in claim 1, wherein the single custom composition designates a referenced graphic a position on one of the sequence of pages that is different relative to that of another referenced graphic.
9. (Original) The method as defined in claim 1, wherein at least one of the sources is a file.
10. (Previously Presented) The method as defined in claim 1, further comprising serving the composition to an imaging client.
11. (Previously Presented) The method as defined in claim 1, further comprising printing the composition.
12. (Previously Presented) The method as defined in claim 1, further comprising sending the composition by email to a designated web site.
13. (Cancelled).

14. (currently amended) A program product comprising computer readable code for causing a system to perform the following method steps to create a customized composition at an assembling web site:

providing a user interface configured to enable a user to input preference data;

automatically correlating the preference data to a plurality of different sources from which graphics related to the preference data are accessible;

for each of the plurality of different sources of graphics, automatically obtaining a reference to a graphic related to the preference data that is accessible from that source; and

receiving a request for a single composition, the composition being a file to include references for accessing a plurality of graphics, each graphic accessible from one of a plurality of different sources, the request including data reflective of information supplied by a user through a user interface;

processing the data to identify the plurality of different sources;

obtaining, for each of the plurality of different sources, the reference to the graphic accessible from that source; and

creating the single a customized composition that includes each obtained reference to a graphic and information for positioning each referenced graphic on a sequence of pages generated by processing the composition.

15. (currently amended) A system for creating a customized composition at an assembling web site, comprising:

a component for providing a user interface configured to enable a user to input preference data;

a component for automatically correlating the preference data to a plurality of different sources from which graphics related to the preference data are accessible;

a component for automatically obtaining, for each of the plurality of different sources of graphics, a reference to a graphic related to the preference data that is accessible from that source; and

a component for receiving a request for a single composition, the composition being a file to include references for accessing a plurality of graphics, each graphic

accessible from one of a plurality of different sources, the request including data reflective of information supplied by a user through a user interface;;

a component for processing the data to identify the plurality of different sources;

a component for obtaining, for each of the plurality of different sources, the reference to the graphic accessible from that source; and

a component for creating the single a custom composition that includes each obtained reference to a graphic and information for positioning each referenced graphic on a sequence of pages generated by processing the composition.

16. (Cancelled).

17. (Cancelled).

18. (Cancelled)
